

SET-11

QUESTION-1

CODE:

```
# Product Category Sales
```

```
category <- c("Electronics", "Clothing", "Appliances")
```

```
sales <- c(50000, 35000, 40000)
```

```
# Pie Chart
```

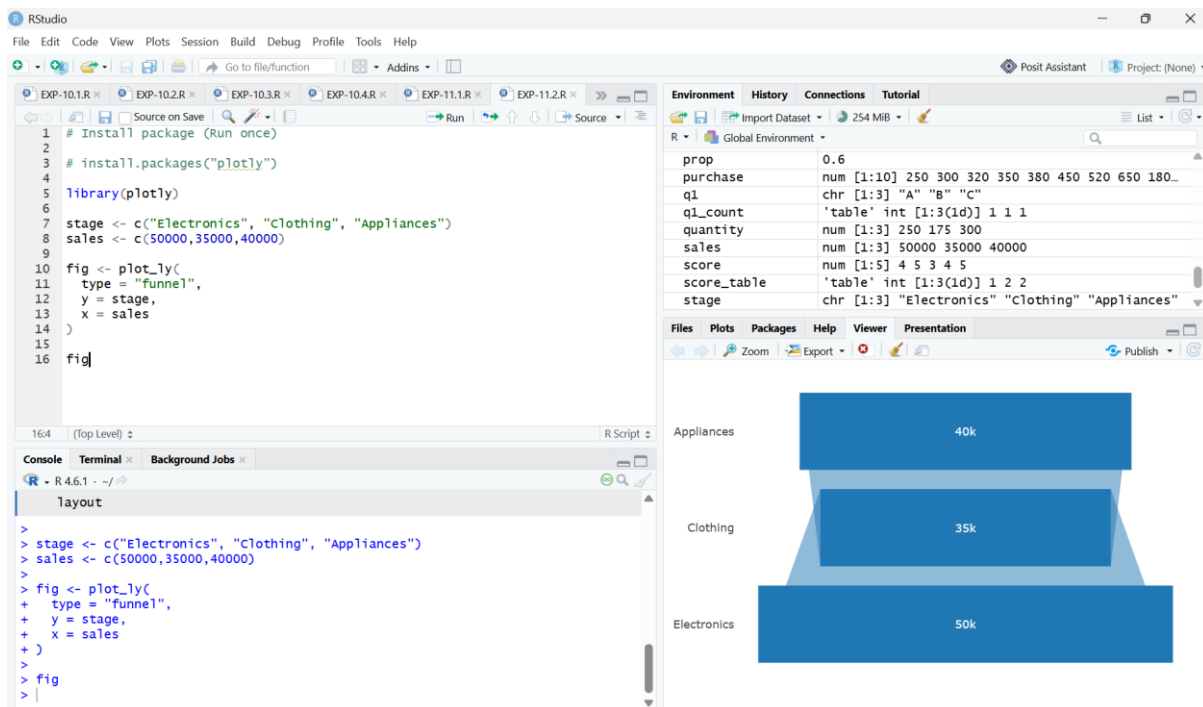

```
pie(sales,
```

```
    labels = category,
```

```
    col = c("skyblue", "pink", "lightgreen"),
```

```
    main = "Sales Distribution by Product Category")
```

QUESTION-2

CODE:

```
# Install package (Run once)

# install.packages("plotly")

library(plotly)

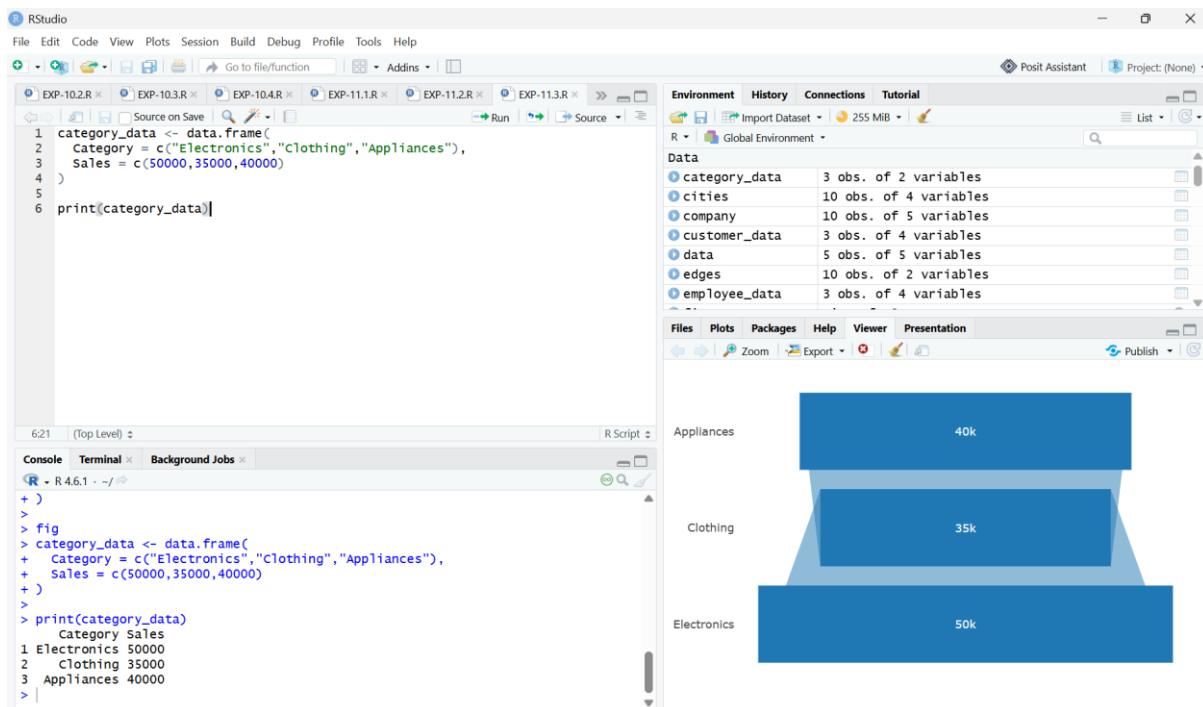

stage <- c("Electronics", "Clothing", "Appliances")

sales <- c(50000, 35000, 40000)

fig <- plot_ly(
  type = "funnel",
  y = stage,
  x = sales
)

Fig
```

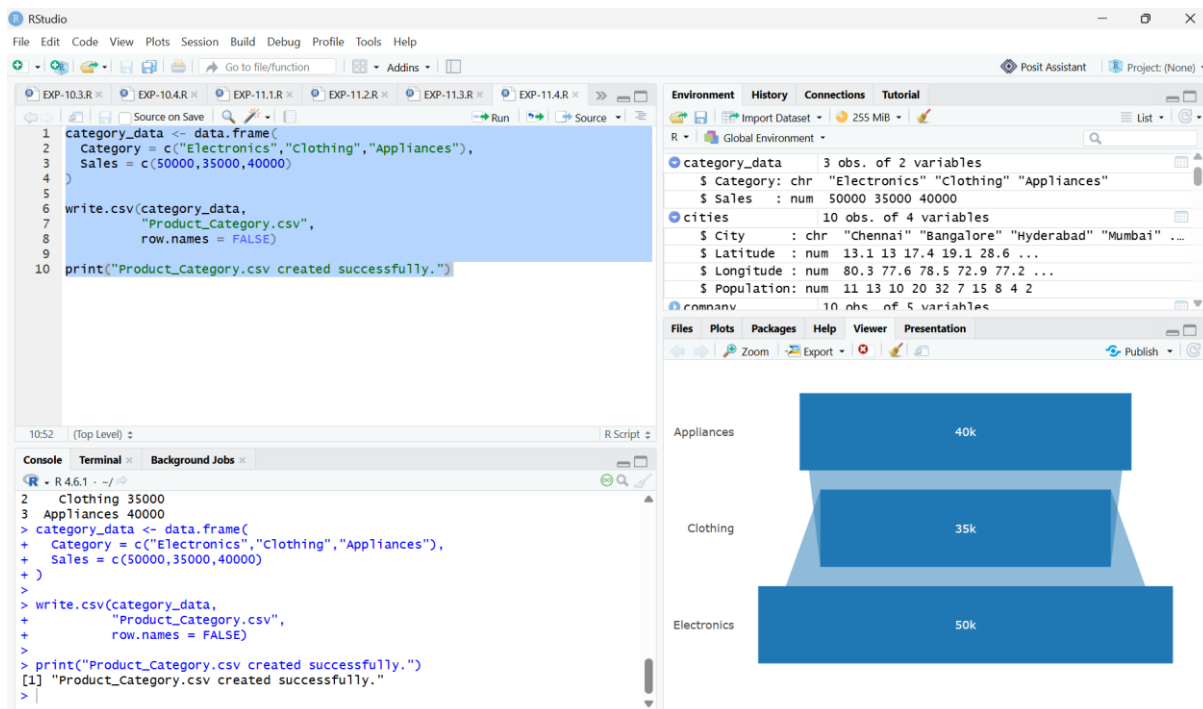

QUESTION-3

CODE:

```
category_data <- data.frame(  
  Category = c("Electronics","Clothing","Appliances"),  
  Sales = c(50000,35000,40000)  
)  
  
print(category_data)
```

QUESTION-4

CODE:

```
category_data <- data.frame(  
  Category = c("Electronics","Clothing","Appliances"),  
  Sales = c(50000,35000,40000)  
)  
  
write.csv(category_data,  
  "Product_Category.csv",  
  row.names = FALSE)  
  
print("Product_Category.csv created successfully.")
```
