

# SET-13

## QUESTION-1

### CODE:

```
# Install package (Run once)
```

```
# install.packages("maps")
```

```
library(maps)
```

```
# Draw World Map
```

```
map("world",
```

```
    fill = TRUE,
```

```
    col = "lightyellow",
```

```
    bg = "lightblue",
```

```
    main = "Geographic Distribution of Cities")
```

```
# Sample City Locations
```

```
points(c(-100,-90,-80),
```

```
       c(40,35,30),
```

```
       col = "red",
```

```
       pch = 19,
```

```

    cex = 1.5)
text(c(-100,-90,-80),
    c(40,35,30),
    labels = c("City A","City B","City C"),
    pos = 4)

```

## QUESTION-2

## CODE:

```

# Geographic Data

temperature <- c(75,68,80)

population <- c(500000,700000,600000)

# Scatter Plot

plot(temperature,
    population,
    pch = 19,
    col = "blue",
    xlab = "Average Temperature (°F)",
    ylab = "Population",

```

```

    main = "Temperature vs Population")
text(temperature,
    population,
    labels = c("City A", "City B", "City C"),
    pos = 4)

```

### QUESTION-3

### CODE:

```

# Geographic Dataset

geo_data <- data.frame(

    City = c("City A", "City B", "City C"),

    Population = c(500000, 700000, 600000),

    Avg_Temperature = c(75, 68, 80),

    Elevation = c(1000, 800, 1200)

)

print(geo_data)

```

## QUESTION-4

### CODE:

```
# Geographic Dataset

geo_data <- data.frame(

  City = c("City A", "City B", "City C"),

  Population = c(500000, 700000, 600000),

  Avg_Temperature = c(75, 68, 80),

  Elevation = c(1000, 800, 1200)

)

# Export CSV

write.csv(geo_data,

  "Geographic_Data.csv",

  row.names = FALSE)

print("Geographic_Data.csv created successfully.")
```
